2. Menggunakan rule()

```
filament-app > app > Filament > Resources > Posts > Schemas > PostForm.php > PostForm > configure()

15 use Filament\Schemas\Components\Section;
16 use Filament\Schemas\Schema;
17 use Filament\Support\Icons\Heroicon;
18
2 references | 0 implementations | You, now | 1 author (You)
19 class PostForm
20 {
21     1 reference | 0 overrides
22     public static function configure(Schema $schema): Schema
23     {
24         return $schema
25             ->components([
26                 Group::make([
27                     // Section A: Post Details – icon pencil
28                     Section::make('Post Details')
29                         ->description('Fill in the details of the post')
30                         ->icon(Heroicon::OutlinedPencilSquare)
31                         ->schema([
32                             Group::make([
33                                 TextInput::make('title')
34                                     ->required()
35                                     ->minLength(5)
36                                     ->maxLength(255)
37                                     ->rules(['required', 'min:5', 'max:255']),
38 
```

3. Menggunakan rules() (Multiple Validation)

```
filament-app > app > Filament > Resources > Posts > Schemas > PostForm.php > PostForm > configure

15 use Filament\Schemas\Components\Section;
16 use Filament\Schemas\Schema;
17 use Filament\Support\Icons\Heroicon;
18
2 references | 0 implementations | You, now | 1 author (You)
19 class PostForm
20 {
21     1 reference | 0 overrides
22     public static function configure(Schema $schema): Schema
23     {
24         return $schema
25             ->components([
26                 Group::make([
27                     // Section A: Post Details – icon pencil
28                     Section::make('Post Details')
29                         ->description('Fill in the details of the post')
30                         ->icon(Heroicon::OutlinedPencilSquare)
31                         ->schema([
32                             Group::make([
33                                 TextInput::make('title')
34                                     ->rules(['required', 'min:3', 'max:100']),
35                                 // ... other fields ...
36                             ])
37                         ])
38                 ])
39             ])
40     }
41 }
```

48                     ],
49                     ColorPicker::make('color'),
50                     ->columns(2),
51                     MarkdownEditor::make('body')
52                     ->columnSpanFull(),
53                 ]),
54                 // Section B: Image Upload – icon foto
55                 Section::make('Image Upload')
56                 ->icon(Heroicon::OutlinedPhoto)
57                 ->schema([
58                     FileUpload::make('image')
59                     ->required()
60                     ->disk('public')
61                     ->directory('posts'),
62                 ]),
63     ]),
64 }
```

Analisis & Diskusi

1. Mengapa validasi penting pada admin panel?

Validasi penting pada admin panel untuk menjaga integritas dan kualitas data. Admin panel seringkali menjadi antarmuka utama pengisian konten database (CRUD) tanpanya, resiko database crash akibat field kosong atau tipe data salah (seperti upload malware ke image upload) sangat tinggi.

2. Apa perbedaan validasi client-side dan server-side?

- Client-side (Bawaan Filament browser HTML5): Cepat, interaktif, merespon langsung sebelum ke server (contoh memunculkan tanda * merah), tapi bisa dimodifikasi oleh user handal.
- Server-side (Aturan ->rules() PHP Laravel): Super ketat, validasi terakhir di database atau Back-End yang tidak bisa dicurangi.

3. Mengapa unique otomatis bekerja saat edit data?

Laravel secara pintar akan menginisiasi *Rule Unique* dengan melempar parameter ID miliknya sendiri jika terdeteksi bahwa form yang digunakan adalah '*EditForm*'. Karena ID telah dikenali pengecualian (ignored), Laravel sadar form tersebut tidak menduplikasi datanya sendiri.

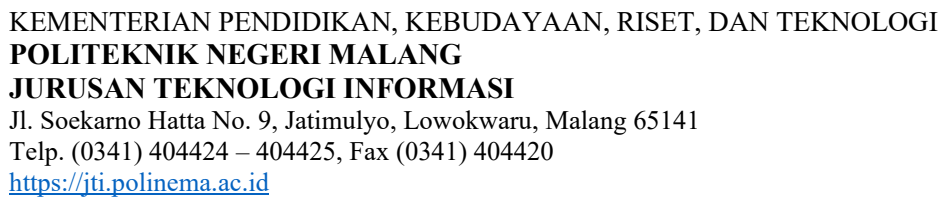

4. Kapan kita perlu menggunakan rules array dibanding string?

- String (->rules('min:5|required')): Digunakan jika aturan sederhana tanpa parameter rumit.
- Array (->rules(['min:5', new RuleAjaib()])): Sangat esensial apabila kita harus memasukkan Class Objek Spesifik Laravel secara custom (seperti Regex Object atau In Database Rule), dimana menggunakan batas | pipe akan menjadi error sintaks karakter PHP. array lebih bersih dan scalable untuk kombinasi filter rumit.

Latihan Praktikum

```
filament-app > app > Filament > Resources > Posts > Schemas > PostForm.php > PostForm > configure()
19  class PostForm
21      public static function configure(Schema $schema): Schema
23
26      Group::make([
27
28          // Section A: Post Details – icon pensil
29          Section::make('Post Details')
30              ->description('Fill in the details of the post')
31              ->icon(Heroicon::OutlinedPencilSquare)
