

Mata Kuliah : Pemrograman Web Lanjut (PWL)
Program Studi : D4 – Teknik Informatika
Semester : 4

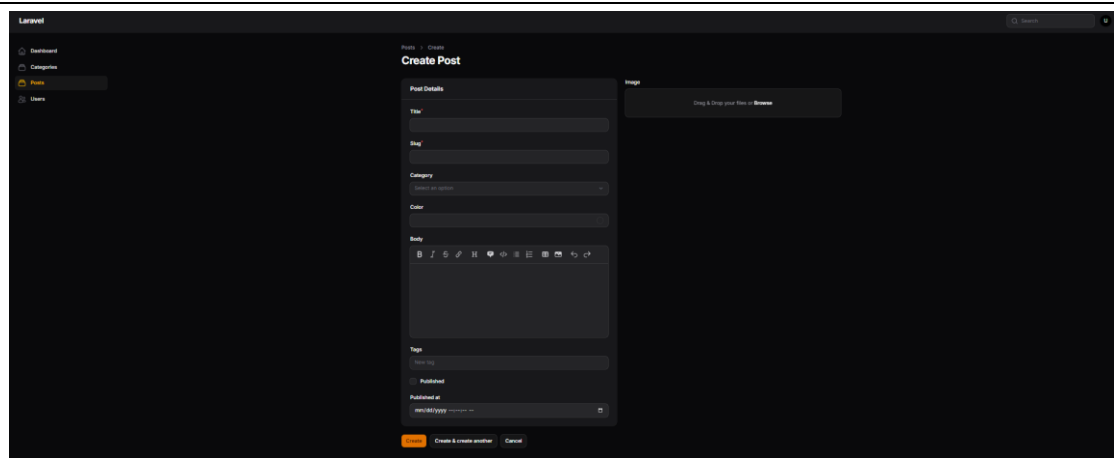

Kelas : 2A
NIM : 244107020030
Nama : Athaulla Hafizh
Jobsheet Ke- : 6

Laporan Jobsheet 06 - 02

Link Repository : <https://github.com/athfizh/Pemrograman-Web-Lanjut>

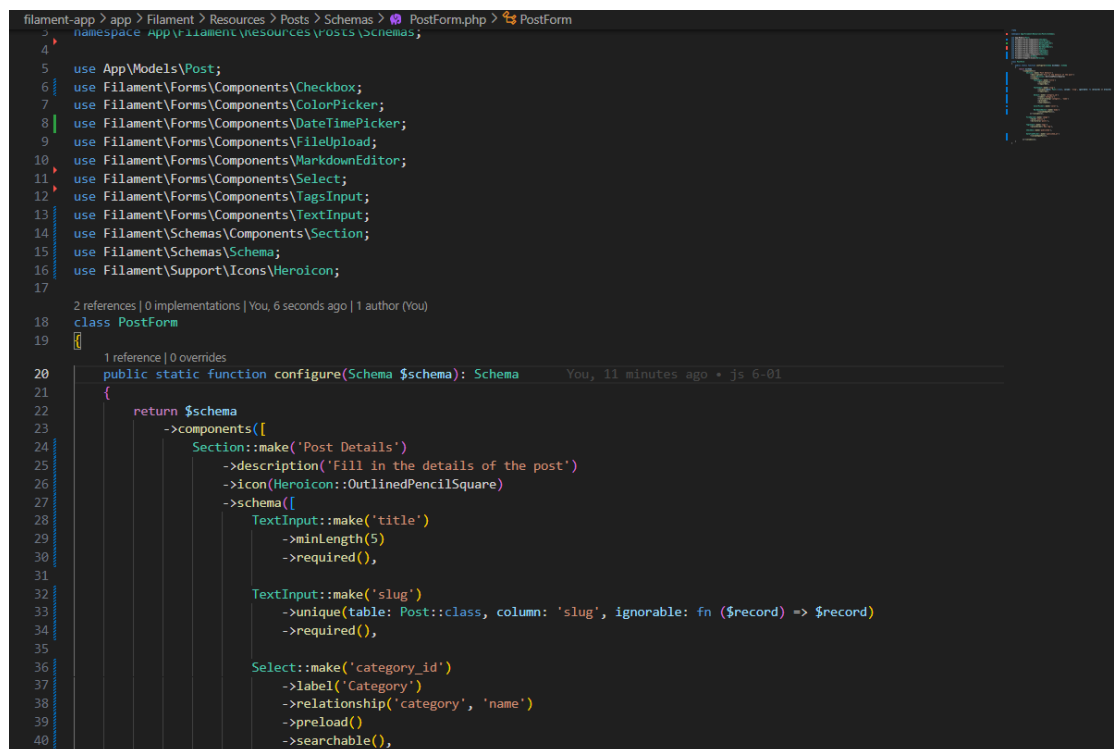

Praktikum

Langkah	Jawaban/Deskripsi
1	Mengatur Layout Dasar dengan Columns <pre>filament-app > app > Filament > Resources > Posts > Schemas > PostForm.php > PostForm > configure() You, 55 seconds ago 1 author (You) 1 <?php 2 3 namespace App\Filament\Resources\Posts\Schemas; 4 5 use App\Models\Post; 6 use Filament\Forms\Components\Checkbox; 7 use Filament\Forms\Components\ColorPicker; 8 use Filament\Forms\Components\DateTimePicker; 9 use Filament\Forms\Components\FileUpload; 10 use Filament\Forms\Components\MarkdownEditor; 11 use Filament\Forms\Components\Select; 12 use Filament\Forms\Components\TagsInput; 13 use Filament\Forms\Components\TextInput; 14 use Filament\Schemas\Components\Section; 15 use Filament\Schemas\Schema; 16 17 2 references 0 implementations You, 54 seconds ago 1 author (You) 18 class PostForm 19 { 20 1 reference 0 overrides 21 public static function configure(Schema \$schema): Schema 22 { 23 return \$schema 24 ->components([25 Section::make('Post Details') 26 ->schema([27 TextInput::make('title') 28 ->minLength(5) 29 ->required(), 30 TextInput::make('slug') 31 ->unique(table: Post::class, column: 'slug', ignorable: fn (\$record) => \$record) 32 ->required(), 33 Select::make('category_id') 34 ->label('Category') 35 ->relationship('category', 'name') 36 ->preload() 37 ->searchable(),</pre>

2

Menggunakan Section

3

Membuat Section Terpisah

```
flamant-app > app > filament > Resources > Posts > Schemas > PostForm.php > PostForm > configure()
18 class PostForm
19 {
20     public static function configure(Schema $schema): Schema
21     {
22         return $schema
23             ->components([
24                 // section 1 - post details
25                 Section::make('Post Details')
26                     ->description('Fill in the details of the post')
27                     ->icon(Heroicon::OutlinedPencilSquare)
28                     ->schemas([
29                         TextInput::make('title')
30                             ->minLength(5)
31                             ->required(),
32                         TextInput::make('slug')
33                             ->unique(table: Post::class, column: 'slug', ignoreable: fn ($record) => $record)
34                             ->required(),
35                         Select::make('category_id')
36                             ->label('Category')
37                             ->relationship('category', 'name')
38                             ->preload()
39                             ->searchable(),
40                         ColorPicker::make('color'),
41                         MarkdownEditor::make('body'),
42                     ])->columns(1)
43                     ->columnSpanFull(),
44                 // section 2 - image
45                 Section::make('Image Upload')
46                     ->schemas([
47                         FileUpload::make('image')
48                             ->disk('public')
49                             ->directory('posts'),
50                     ]),
51                 // section 3 - meta
52                 Section::make('Meta Information')
53                     ->schemas([
54                         TagsInput::make('tags')
55                             ->placeholder('New tag'),
56                         Checkbox::make('published'),
57                         DateTimePicker::make('published_at'),
58                     ]),
59             ]),
60     }
61 }
```

4	Menggunakan Group untuk Layout Horizontal

```
filament-app > app > Filament > Resources > Posts > Schemas > PostForm.php > PostForm > configure()
14 use Filament\Schemas\Components\Group;
15 use Filament\Schemas\Components\Section;
16 use Filament\Schemas\Schema;
17 use Filament\Support\Icons\Heroicon;
18
2 references | 0 implementations | You, 1 second ago | 1 author (You)
19 class PostForm
20 {
21     1 reference | 0 overrides
22     public static function configure(Schema $schema): Schema
23     {
24         return $schema
25             ->components([
26                 Group::make([
27                     // section 1 - post details
28                     Section::make('Post Details')
29                     ->description('Fill in the details of the post')
30                     ->icon(Heroicon::OutlinedPencilSquare)
31                     ->schema([
32                         TextInput::make('title')
33                         ->minLength(5)
34                         ->required(),
35                         TextInput::make('slug')
36                         ->unique(table: Post::class, column: 'slug', ignorable: fn($record) => $record)
37                         ->required(),
38                         Select::make('category_id')
39                         ->label('Category')
40                         ->relationship('category', 'name')

Modifikasi layoutnya dengan mengatur collumnya. Tambahkan code berikut

```
filament-app > app > Filament > Resources > Posts > Schemas > PostForm.php > PostForm > configure()
19 class PostForm
21     public static function configure(Schema $schema): Schema
22     {
23         // section 1 - post details
24         Section::make('Post Details')
25             ->description('Fill in the details of the post')
26             ->icon(Heroicon::OutlinedPencilSquare)
27             ->schema([
28                 TextInput::make('title')
29                     ->minLength(5)
30                     ->required(),
31                 TextInput::make('slug')
32                     ->unique(table: Post::class, column: 'slug', ignorable: fn($record) => $record)
33                     ->required(),
34                 Select::make('category_id')
35                     ->label('Category')
36                     ->relationship('category', 'name')
37                     ->preload()
38                     ->searchable(),
39                 ColorPicker::make('color'),
40                 MarkdownEditor::make('body'),
41             ])->columns(1),
42         ])->columnSpan(2),
43     }
44
45     Group::make([
46         // section 2 - image
47         Section::make('Image Upload')
48             ->schema([
49                 FileUpload::make('image')
50                     ->disk('public')
51                     ->directory('posts'),
52             ]),
53         // section 3 - meta
54         Section::make('Meta Information')
55             ->schema([
56                 TagsInput::make('tags')
57                     ->placeholder('New tag'),
58                 Checkbox::make('published'),
59                 DateTimePicker::make('published_at'),
60             ]),
61     ])->columnSpan(1),
62 ])->columns(3);

Analisis & Diskusi

1. Mengapa layout form penting dalam aplikasi admin?

Layout yang baik mempercepat input data, mengurangi kesalahan, dan meningkatkan UX admin. Field yang dikelompokkan logis (detail, gambar, meta) memudahkan navigasi dan pengisian form.

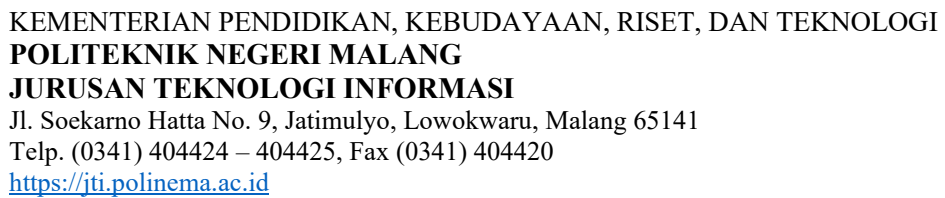

2. Perbedaan Section dan Group?

Section = kotak visual berisi judul, deskripsi, dan border cocok untuk mengelompokkan field secara semantik. Group = container tak terlihat (tanpa styling) yang hanya mengatur posisi/lebar antar elemen dalam grid.

3. Kapan menggunakan `columnSpanFull()`?

Ketika field harus memenuhi seluruh lebar baris, misalnya MarkdownEditor (textarea besar) agar tidak terlihat sempit jika berdampingan.

4. Apa Keuntungan sistem grid 12 kolom?
